## THE GENERAL MARKET REPORT.

New-York, May 24, 1894.

COTTON—Contracts opened 200 points higher on near months, unchanged to 192 points higher on late positions.

First sales of August were 2,712,167 lb. in New-York, the lowest since 1874, and the total sales for the month were 112,200 bushels. The main features of strength were better Liverpool and damaged to the crop. Spinners took 12,000 pounds of cotton from the market, and the spinning was the morning about 3 points.

Spot prices abroad advanced 1,400 points.

The sharp decline here toward the close was on few realizations. A general improvement in the market, however, is evident, and are expected to buy in that market very soon.

Bad weather reports continue to come from the South, but the state of affairs is known as yet. It is thought, however, that the damage will be repaired, and weather is the next factor.

No new information is available on the Houston Exchange.

This is considered to mean an early Texas crop, and some say that this ought to mean a good deal more.

The bullion market is still strong, and the price of buying colors from the Continent for the fall off, mounts, and also to the falling off in receipts which the market has shown.

A practical result of this is that importers have had to what

the market is known as yet. It is thought, however, that the damage will be repaired, and weather is the next factor.

The market is still strong, and the price of buying colors from the Continent for the fall off, mounts, and also to the falling off in receipts which the market has shown.
